Summer School 2023: Bioethics in Context X

Nature, Culture, and the Plurality of
Human-Nature Relationships

Bioethics in Context X – Nature, Culture, and the Plurality of Human–Nature Relationships

The summer school will take up a question, which is central to Integrative Bioethics: the various forms of the position of man in relation to nature, including human-nature interaction. The fact that nature cannot simply be an external „resource“ for man already results from man’s corporeality and bodily existence (Leiblichkeit). Also in other respects the spheres of nature and culture as second nature are not simply unrelated to each other, which has been brought to attention in various ways in the philosophical tradition from antiquity on. Especially in times of an increasing „virtualization“ of life, the systematic and conceptual challenge is to think together man’s embeddedness in nature and man’s independence from it in an appropriate, non–reductionist and therefore also future–oriented way.

Blended Intensive Programme Partnership (Erasmus+)

The Sommer School will – for the first time since its inception – also include a virtual component. This will take the form of a debriefing, in which staff and students revisit the topics that were presented at the academy in Tutzing. This is meant to give especially the students the opportunity to delve once again deeper into these bioethical topics and ask questions. The virtual component is scheduled for 24th of July 2023. The participation is mandatory for students who attended the Sommer School in Tutzing.
