# Social Media – User Generated Contents

By David Ndichu

# User Generated Contents (UGC)

- + User Generated Contents (UGC) is any content—text, videos, images, reviews, etc.—created by people
- + It may effected to the decision maker who need to listen to the sound of social media

# Natural Language Processing-NLP

- + NLP is a field in machine learning with the ability of a computer to understand, analyze, manipulate, and potentially generate human language. NLP is used in several area such as:
- + Information Retrieval
- + Information Extraction
- + Machine Translation
- + Sentiment Analysis
- + Text Summarization
- + Etc...

# What people think?

- + *"Which phone should I buy?"*
- + *"Which Professor to work for?"*
- + *"Whom should I vote for?"*

# What people think about Phone?

# Example of reviews

## รีวิว iphone XR จาก ตปท. มั่นติย์นะ ไม่ใช่แค่พอใช้นะแกร~

iPhone iOS

สรุปจาก the verge นะครับ

<https://www.theverge.com/2018/10/23/18011306/apple-iphone-xr-review-camera-scre>

(บ้านเรามีของตาอู๋ spin9 รีวิวแล้วนะ)

สรุป

- ชิป A12 bionic ,กล้องหน้า,กล้องหลัง(ยกเว้นเทเล ใช้ซูม) HW แทบจะยกมาเหมือน xs,xs max
  - ประสบการณ์การใช้งานแทบไม่ต่างจาก xs ในราคาถูกกว่า همینนี้
  - จอดีกว่า xs แต่ไม่ห่วย คือจอเท่า iphone 7 ใครใช้จอ iphone 7 มาก่อนก็คงเฉยๆหรือไม่สัความดำไม่เท่า เปิด true tone สีจะ worm กว่า xs
- ไม่ support HDR กับ dolby vision ถ้าแค่เรื่อง จอมาก ไป xs ดีกว่า (xs max สี HDR เวลาดูหนังแจ่มมาก-จขกท)

# Basic components of an opinion

1. **Opinion holder:** The person or organization that holds a specific opinion on a particular object
2. **Object:** item on which an opinion is expressed
3. **Opinion:** a view, attitude, or appraisal on an object from an opinion holder.

# Type of opinions

- + **Direct Opinions:** direct sentiment expressions on some target objects, e.g., products, events, topics, persons.
  - + E.g., “the picture quality of this camera is great.”
- + **Comparative Opinions:** Comparisons expressing similarities or differences of more than one object. Usually stating an ordering or preference.
  - + E.g., “car A is cheaper than car B”

# Opinion Mining- Direct Opinion

Opinion Mining → Sentiment classification computational study of opinions, sentiments and emotions expressed in text.

- + Document Level
- + Sentence Level
- + Feature Level

# What is an opinion?

- An *opinion* is a quintuple

$$(o_j, f_{jk}, so_{ijkl}, h_i, t_l)_i$$

where

- $o_j$  is a target object.
- $f_{jk}$  is a feature of the object  $o_j$ .
- $so_{ijkl}$  is the sentiment value of the opinion of the opinion holder  $h_i$  on feature  $f_{jk}$  of object  $o_j$  at time  $t_l$ .  $so_{ijkl}$  is +ve, -ve, or neu, or a more granular rating.
- $h_i$  is an opinion holder.
- $t_l$  is the time when the opinion is expressed.

# Sentiment Classification

(Pang and Lee, et al 2002 and Turney 2002)

- + Classify a document based on the overall sentiment expressed by opinion holder
  - + Classes: Positive, or negative (and neutral)
- + In the model,  $(o_j, f_{jk}, so_{ijkl}, h_i, t_l)$ ,

# Text representative

- + The standard representation methods : Bag-of-Words (BOW)
- + BOW:
  - + text is represented as a vector of words weights
  - + techniques based on the term frequency information

# Text representative

- + Problem: BOW
  - + No sequence of words considered (ignores the context of words)
  - + No structure of document is considered
  - + Return only rough estimations regarding the relatedness of texts

# What is Centroid?

The physical analogon: -> **centre of mass**

M. M. Kubek and H. Unger, "Centroid Terms as Text Representatives,"  
" *Proceedings of the 2016 ACM Symposium on Document Engineering - DocEng 16*, 2016.

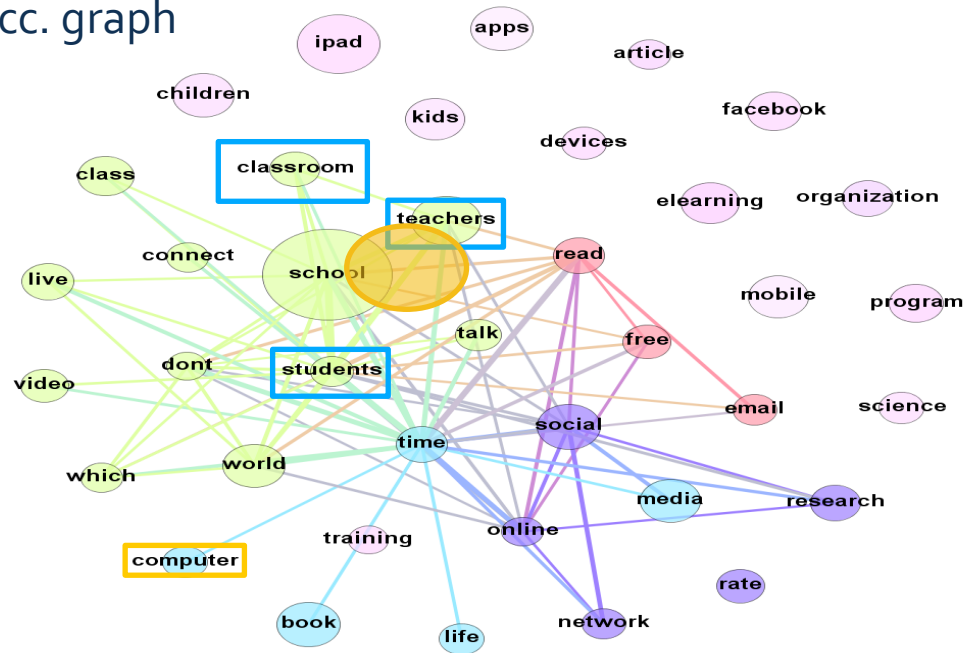

# Text Representing Centroids

- + Text representation model is an important element in determining the performance and accuracy of the categorization.
- + The suitable representation of the textual information is representing the semantic information of the text.

# Text Representing Centroids (TRC)

- words = mass point
- distance vector = distance in co-occ. graph

→ e.g. school is the centroid of a document containing classroom, students, teacher but also computer

→ The centroid of a document is the term with the minimum average distance to all words of the respective document in the co-occ. graph.

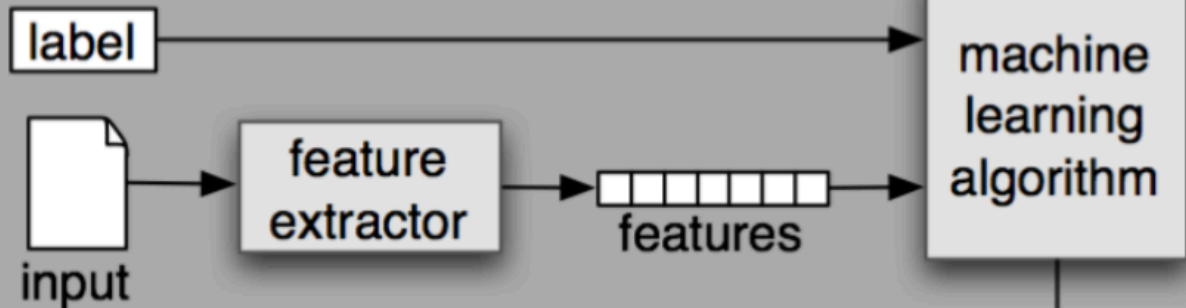

# Algorithm for Centroid term

- + Step 1: Calculate Weight and co-occurrence frequency
- + Step 2: Calculate a distance
- + Step 3: Calculate centroid-term of documents

The centroid of a document  $\rightarrow$  the minimum average distance to all words of the respective document in the co-occ. graph.

# Classification Framework

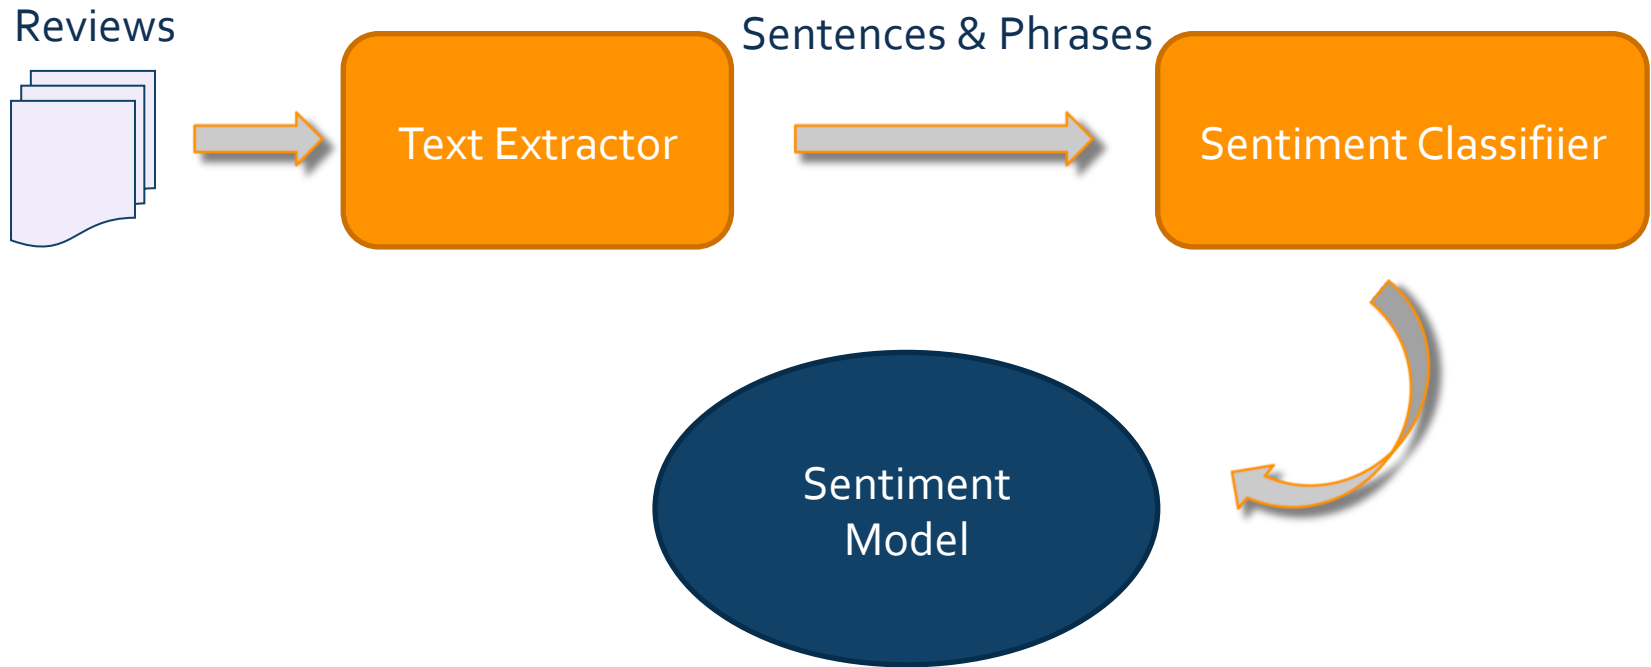

## (a) Training

## (b) Prediction

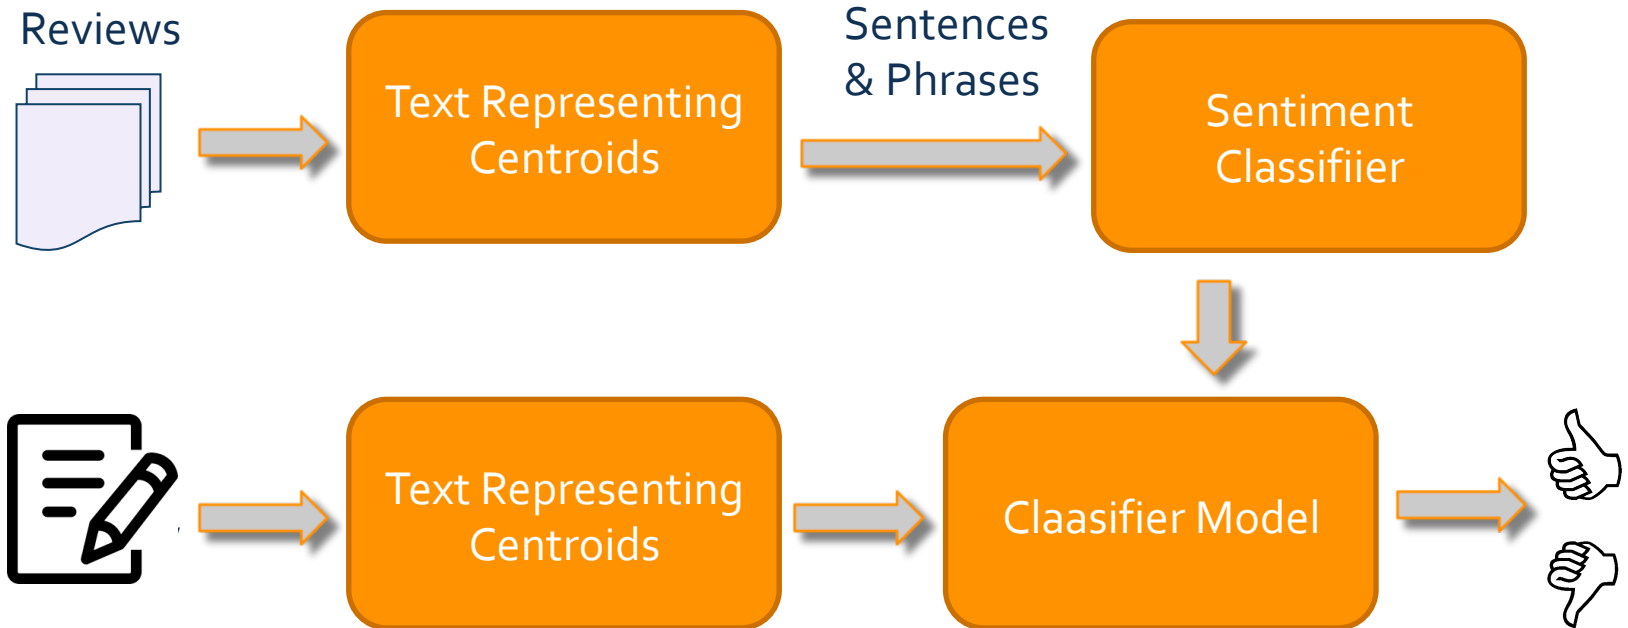

# Opinion Mining Framework

# Opinion Mining using Centroids

# Summary

- + Generally modeled as classification
  - + predict a binary or ordinal label (e.g. Positive, Negative, Neutral)
- + Text Extractor:
  - + Using centroid terms: Single words that semantically and topically characterize text documents

# Example of Sentiment Analysis App. S-Sense (NECTEC)

+ <http://ssense.in.th/tourism/>

The screenshot displays the S-Sense Sentiment Analysis App interface for tourism. The interface is divided into several sections:

- Navigation Bar:** Contains four dropdown menus: "สถานที่ท่องเที่ยวยอดนิยม" (Most Popular Tourist Attractions), "สถานที่ท่องเที่ยวที่ถูกกล่าวถึงในเชิงบวก" (Tourist Attractions Mentioned Positively), "สถานที่ท่องเที่ยวที่ถูกกล่าวถึงในเชิงลบ" (Tourist Attractions Mentioned Negatively), and "จำนวน ปี 2559" (Year 2559).
- Location Cards:** A row of 10 cards, each labeled "Cinque Terre" with a question mark icon. Below each card is a Thai location name: หาดทรายขาว, ตลาดได้รุ่งหัวหิน, น้ำพุร้อนสันกำแพง, เกาะกระดาน, มังกรสวรรค์, ตลาดน้ำ, อุทยานสวรรค์, ถ้ำปลา, เขาชะจรรย์, ม่อนแจ่ม.
- Map:** A map of Thailand with a green pin marking the location of Hat Trai Khao.
- Sentiment Analysis Pop-up:** A white pop-up window centered over the map, displaying sentiment analysis results for "หาดทรายขาว":
  - Positive sentiment: 98% (indicated by a green plus sign)
  - Negative sentiment: 2% (indicated by a red minus sign)
  - Overall sentiment: Smiling face with smiling eyes emoji (😊)

Thank you
